GlobalMedia Group Releases Real-time Inspection and Cataloging Software

01/19/2005 – GlobalMedia Group, LLC, Scottsdale, AZ announced today that it is shipping its iNSPECX 1.5 Inspection and Cataloging Software which allows users to inspect, measure and catalog subjects in real-time without additional programming or third party scripts.

“The new software allows our current camera customers as well as users of other capture card manufacturers to start working right out of the box,” states Bonsal Glascock, COO. “It is native to the XP user and unlike other software application of this kind, it requires no programming. We can have customers up and running in minutes, not months!” he adds.

The software has serious tools like “Live-preview” with panning, time-lapse, motion detection, measuring tools, time stamps. It also features a professional cataloging and sessions environment. It will run under any WDM supported video capture or camera drivers and supports the Windows XP operating system.

The iNSPECX software has been painstakingly developed to have the user working right-away. Measuring, time-lapse and motion detection are all part of this new version. “This software rocks”, said Michael Harris, GlobalMedia’s CTO. “No guess work in saving your images, and cataloging is automatic. The sessions makes saving invisible to the end-user. You can’t lose anything! iNSPECX 1.5 also has specialized RGB24:YUV transcoding and offers both live chroma and gray-scale inversion video builds. “These are true negatives of the subject. Not some complex variation of Y:8:0:0 or a blue tint scaling process. The video is clean and uncompressed on the screen. What you see is what you get.”, adds Harris.

The software can be downloaded from the GlobalMedia web-site and has a free 10 day trial-period. iNSPECX 1.5 software is priced at \$795.00 for iREZ camera users and \$995.00 for the OEM version. iNSPECX is available immediately for download at: <http://www.globalmedia.com/inspecx> as a 10 day try and buy.

Headquartered in Scottsdale, Arizona, GlobalMedia Group, LLC (www.globalmedia.com) is a leading designer, innovator and developer of audio and video communication hardware. The company’s products, which are sold globally primarily through Original Equipment Manufacturers (OEMs) and distributors, merge function and design with video communications for multiple channels, including but not limited to business to business presentations, training, education, point to point and multipoint videoconferencing, Internet broadcasting, telemedicine, and security.
